Unit Testing is a software testing approach which performs at the time of the development to test the smallest component of any software. It means rather than testing the big module in one go, you test the small part of that module. A small component in the sense, it could be any function, any property or any class which is handling the specific functionality.

-- That's also true of unit tests. It sounds to me like the end-to-end tests are being used as an excuse for not writing unit tests. - Robert Harvey May 21 '13 at 18:03. 13. That is not true of unit tests. Changing/removing/creating methods or classes require updating all unit tests for those methods or classes. Not so in end to end tests ...
