The focal length ring is also on the camera's lens, and is found on any lens that has a variable focal length. In basic terms, this is the camera's zoom. Changing the focal length changes the zoom, and rotating the focal length ring is what you do to change the zoom. More key buttons on my Canon DSLR.

Your DSLR camera gives you the option to shoot either JPEG or RAW files. JPEG is the default image format that's used in most point-and-shoot cameras. These images are compressed to a smaller size by your camera with certain information being removed from the image, resulting in the loss of some detail and color variation.
