Nowadays, we are immersed in tens of newly-proposed evolutionary and swam-intelligence metaheuristics, which makes it very difficult to choose a proper one to be applied on a specific optimization problem at hand. On the other hand, most of these metaheuristics are nothing but slightly modified variants of the basic metaheuristics. For example, Differential Evolution (DE) or Shuffled Frog ...

Metaheuristics may make few assumptions about the optimization problem being solved, and so they may be usable for a variety of problems. [3] Compared to optimization algorithms and iterative methods , metaheuristics do not guarantee that a globally optimal solution can be found on some class of problems. [3]

Due to the nature of research, there are constantly new metaheuristics. Below is a list of metaheuristics: 1952: Robbins and Monro work on stochastic optimization methods. 1952: Fermi and Metropolis develop an early form of pattern search as described belatedly by Davidon.
