we establish for complex delta analytic functions a version of the classical Cauchy integral theorem. To do so, the concepts of connectedness, domain, and fence of a set are introduced for sets in the time scale complex plane. 2. FUNCTIONS OF TWO REAL TIME SCALE VARIABLES Let T_1 and T_2 be time scales. Let us set $T_1 T_2 = f(x;y) : x \in T_1; y \in T_2$. The set $T_1 T_2$

A complex function is a function from complex numbers to complex numbers. In other words, it is a function that has a subset of the complex numbers as a domain and the complex numbers as a codomain. Complex functions are generally supposed to have a domain that contains a nonempty open subset of the complex plane.

Complex analysis - Wikipedia

This course provides an introduction to complex analysis which is the theory of complex functions of a complex variable. We will start by introducing the complex plane, along with the algebra and geometry of complex numbers, and then we will make our way via differentiation, integration, complex dynamics, power series representation and Laurent series into territories at the edge of what is known today.
