Complex Adaptive Systems Mit

Complexity in complex adaptive systems refers to the potential for emergent behavior in complex and unpredictable phenomena. Examples of complex adapting systems include the economy,

ecosystems, the human brain, developing embryos and ant colonies. Each is a system with a network of many agents acting in parallel.

A complex adaptive system is a system in which a perfect understanding of the individual parts does not automatically convey a perfect understanding of the whole system's behavior. In complex adaptive systems, the whole is more complex than its parts, and more complicated and meaningful than the aggregate of its parts. The study of

The Five Steps All Leaders Must Take in the Age of Uncertainty

- A complex adaptive system is a system made up of many individual parts or agents.
- The individual parts, or agents, in a complex adaptive system follow simple rules.
- There is no leader or individual who is coordinating the action of others.
- Through the
