Lasik Eye Surgery | Eye Surgeon King of Prussia | Philadelphia

LASIK or Lasik (laser-assisted in situ keratomileusis), commonly referred to as laser eye surgery or laser vision correction, is a type of refractive surgery for the correction of myopia, hyperopia, and astigmatism. LASIK surgery is performed by an ophthalmologist who uses a laser or microkeratome to reshape the eye's cornea in order to improve visual acuity.

LASIK - Wikipedia

Laser surgery uses a tiny, powerful light beam to help your eye drain fluid more easily. By making holes or shrinking clogged areas of the eye, laser surgery can help decrease your eye pressure. Glaucoma laser surgery is usually done at a doctor's office or outpatient surgery clinic. One or both eyes may be done.

Laser Surgery for Glaucoma - What You Need to Know

Laser treatment, or trabeculoplasty, is a simple procedure to treat glaucoma that your eye doctor can do in the office. It works by using a laser to help the fluid in your eye drain away, which can help lower the pressure in your eye. Find out whether you need laser treatment, how it works, and what happens afterward.
