Abstract. This chapter addresses the psychological effects of social stigma. Stigma directly affects the stigmatized via mechanisms of discrimination, expectancy confirmation, and automatic stereotype activation, and indirectly via threats to personal and social identity. We review and organize recent theory and empirical research within an identity threat model of stigma.

The Social Psychology of Stigma | Annual Review of Psychology

"Detailed investigations of stigma serve as a gathering point for students to explore a wide variety of mainstream social-clinical topics, including a) stereotypes; b) prejudice and discrimination; c) social salience; d) social interaction (or lack thereof); e) the self, self-perception, and self-esteem; f) stress and health; and g) ingroup-outgroup issues....A fine work that should be as liberally used in the classroom as it is bound to be in the laboratory."

Social Stigma, Bullying, and the Pandemic | Psychology Today

Social stigma is the disapproval of, or discrimination against, a person based on perceivable social characteristics that serve to distinguish them from other members of a society. Social stigmas are commonly related to culture, gender, race, intelligence, and health. Stigma can also be against oneself, stemming from a negatively viewed personal attribute that results in a "spoiled identity" (i.e., self-stigma.)
